Measurements of the diffusion parameters in the Al-Ag
system support the hypothesis regarding the effect of
the valency of the components on interatomic bonds. On
fusing two metals together, a space lattice is produced,
the strength of which differs from that of the space lat-
tices of the pure components entering the alloy. With a

compounds, Carbides, Acetylenes, Ionization cham-
bers, Calibration, Counting methods, Chemical
reactions.

A simple determination of tritium in tritiated water
has been developed, using the reaction of tritiated
water on calcium carbide, and counting the acetylene
formed in a calibrated ionization chamber. No memory
effects have been observed; a slight isotopic separa-
tion was detected and estimated. (Author)
